

Methods, Systems, and Devices for Location Specific Alerts

Abstract of the Disclosure

Methods, systems, and devices for location specific alerts. The method can include determining one or more positions using a navigation device. One or more weather signals received on at least a first channel of the navigation device, where the one or more weather signals include location information, can be compared to the one or more positions. From the comparison, a weather alert can be generated in the navigation device. Determining the one or more positions further includes determining the positions from a global positioning system (GPS) enabled navigation device.
